

# Tyler Bantley

## ~Full Stack Developer~

Full stack web developer pursuing to find my place in the web and software development industry. Recently earned a certificate in full stack development from the University of Minnesota with newly developed and ever-growing skills in front and back-end technologies. I always strive to be the best that I can be whether working solo or in a team setting and I plan to bring along these values with me into the coding industry. With each project I will also bring someone who is detail oriented, persistent, and reliable. I've always had a passion for exploring the combination of tech and design and I think I would be a great entry level candidate for any development team.

**It's always my goal to keep learning and exceeding expectations.**

### LANGUAGES AND TOOLS

**Languages:** HTML, CSS, JavaScript, SQL

**Frameworks/Libraries:** React, Bootstrap, Bulma, Handlebars, JQuery

**Apps/Packages:** MongoDB, Express.js, Node, GraphQL, Insomnia, Sequelize, Jest

**Deployment:** Heroku, GitHub

### EDUCATION AND CERTIFICATES

#### **University of Minnesota - Minneapolis, MN**

Web/Software Development Bootcamp Certificate 12/21 - 03/22

A full time, 3 month intensive program to build skills and acquire knowledge in front-end and back-end web development. Graduated 03/10/22

Average Academic - **A**

Cont.

## EXPERIENCE AND PROJECTS

### ~ **Chord Base**, 12/21-01/22

Live Link: <https://amber-robeck.github.io/Chord-Base/>

An app to help teach someone how to play guitar chords. This app includes diagrams to show finger placement, an instructional page, and even a sound button so you can match each chord to the correct sound.

- Did a majority of the front-end styling and CSS on my own and learned a new framework other than bootstrap. (Bulma)
- Implemented the use of API's and expanded my knowledge of these concepts.

### ~ **Employee Scheduling Tool**, 01/22-02/22

Live Link: <https://shrouded-anchorage-20681.herokuapp.com/>

A platform to streamline the scheduling process where employees can fill out their availability for the upcoming weeks. The intention is to make scheduling easier and more efficient for employers and managers. Inspiration came from my wife who is always making schedules but has to send out a bunch of emails first to get availability.

- Worked with database design and improved my skills in this field.
- My first app built using Handlebars.

### ~ **Creative Dev**, 02/22-03/22

Live Link: <https://glacial-ravine-72346.herokuapp.com/>

Application for fellow developers to share games, websites, apps, or anything they have built over their career as a web dev. With this idea we can also gain feedback through our comment features and network with other devs.

- Improved skills in sign-up, login, logout features of application.
- Gained much more confidence in using React, Apollo, and GraphQL with this project.
- Connecting front-end and back-end.
